Volume 1 Issue 1

The absence of dinosaurs in our world today starkly illustrates the unyielding march of change. Once upon a time, the Earth reverberated with the calls of these magnificent creatures, but now, we explore their echoes through virtual reality headsets. This profound transformation, from the forests to digital landscapes, encapsulates the essence of our journey through time.

Change is relentless and, at times, formidable. The world during our younger days, the familiar comforts and dreams of our 15-year-old selves, often feels like a distant memory. The rapid advancements in technology and society make us yearn for those simpler times, and we fear losing the jobs and lifestyles we've come to rely on. Yet, this fear is a natural response to the unknown, a testament to our human desire for stability and certainty.

But what if we shifted our perspective? Instead of fearing change, we could see it as an opportunity, a chance to evolve, learn, and adapt just as the world has done over millennia. Change is not merely an obstacle to overcome but it is a catalyst for growth. These technological advancements

Open new doors to careers and lifestyles people couldn't have dreamed of 4 to 5 years ago. What we learn from the dinosaurs is that we have the ability to learn and adapt—unlike them, who didn't and are now just the stars of museum exhibits and kids' lunchboxes. Adapting is in fact our greatest asset. Lifelong learning becomes a crucial strategy, allowing us to stay relevant and engaged in an ever-changing world. We not only learn to survive the tide of change but also learn to dance with it, creating a future that is as rich and vibrant as the past we hold dear.

Do we ever think of those dinosaurs that could've been intimidated by Blackbox AI or a Cloud it can't see? We must embrace and accept changes, after all change is the only constant.
